

How's your BMC Digital Service Management Health?

Get a BMC Discovery (ADDM) Health Check

Maximize your ADDM investment as the foundation for your IT asset, application workflow and service management.

Let a specialist help you assess your current BMC Discovery (ADDM) use and design a fitness roadmap to assure you are getting maximum performance and ROI – from IT asset discovery to application dependency models - so you can improve agility and achieve new strides in your DevOps, cloud, compliance and overall digital service delivery regimen.

Get a Real-time Graphic View of Your IT Service Delivery Health

Service Impact Modeling delivers intuitive monitoring, focused identification of component relationships and automation capabilities – all in the context of service delivery.

Leverage the BMC TrueSight Suite (BPPM), to create an easy-to-interpret impact view of real-time performance status, including root-cause event identification, for related components supporting your priority applications and business services.

Datatrend.com

Partner

Datatrend helps drive your digital transformation leveraging the BMC Solutions Suite

Datatrend has developed a Center of Excellence including consulting, implementation, unique modeling solutions, run services, training and staffing, all built around BMC Solutions. BMC Discovery (ADDM) and applications modeling serve as a foundation for CMDB population and TrueSight (BPPM) enabled service impact modeling, driving enterprise IT optimization, ITSM, automation and key enterprise initiatives. We can augment and equip your internal team for ongoing leverage of BMC tools and best practices.

BMC Software Solutions

Datatrend offers expertise in implementing and leveraging BMC Software suites and modules to support key IT services and business results.

Datatrend Areas of Specialization, Services & Deliverables

With discovery and application modeling as a foundation, Datatrend helps you gain visibility, monitoring and proactive management of your service delivery, application workflows and the supporting IT infrastructure.

Business Impact & Benefits

Assure high availability and improved IT service management to support key enterprise initiatives in resource utilization, cloud orchestration, “shadow IT”, DevOps, security and compliance management.

BMC Discovery (ADDM)

(f.k.a. BMC Atrium ADDM Application Discovery and Dependency Mapping)

- Automated IT asset discovery (software, servers/VMs, SAN, network, configuration)
- Application dependency mapping & modeling
- Scan results data refinement & CMDB prep
- Efficient scaling to 100's of app models
- ADDM implementation & run services
- Staffing BMC-trained resources (onsite/remote)
- Templates & training
- ADDM health check

- Know your assets/remove vulnerability of unknowns
- Application workload management
- Improved change management
- Process improvement
- Improved disaster recovery (DR)
- Faster MTTR
- Enhanced vendor & policy compliance
- Enhanced security
- Rationalize applications, software & platform components

BMC Atrium Configuration Management Database (ITIL® CMDB)

- Deliver a system of record for IT infrastructure and services

- Enable process automation & reporting

BMC TrueSight Operations Management

- BMC TrueSight Infrastructure Management
- BMC TrueSight Event & Impact Management

(f.k.a. BPPM: BMC ProactiveNet Performance Management)

- Associate & manage business services/ application workloads
- Strategic model development paired with technical implementation expertise
- Consolidate monitoring tools into single management view
- Prioritize monitoring/remove redundancies
- Proactive monitoring/ alert functions and extended application modeling
- Pattern analysis/ identify automation opportunities
- BPPM implementation & run services
- Staffing BMC-trained resources (onsite/remote)
- Templates & training
- BPPM health check

- Reduced IT time on maintenance
- Clear root cause ID
- Prioritized IT component issues in services impact context
- Agility & innovation/enable daily production releases
- Utilization/provisioning & performance optimization
- Multiple data center management/ migrations & consolidation
- Disaster recovery (DR)
- Cloud orchestration enablement
- Compliance: regulatory/vendor licensing
- Centralized, full-team view & relevance
